Let's Start!

You can't trust everything you read online!

Learning Outcome

Explain about technology and technical problems in communicative situations.

Ask your partner:

- Which websites do you use when you need information?
- How do you know if something you read on the Internet is accurate or not?

Can Do Statements

- I can talk about technology.
- I can discuss how to deal with problems.
- I can ask for clarification or use rhetorical questions to emphasize a point.

Let's Explore!

Sally writes about how to avoid **clickbait***.

* "Clickbait" refers to a type of website meant to attract visitors by clicking on the links provided, usually containing inaccurate information.

Instructions: Read the text aloud.

Do you remember how life was before the Internet?

If you are a digital native like me, it seems almost impossible to imagine a time when the answer to any question was more than a few clicks away. However, does that mean you always find what you're looking for online? How do you process all the information that lies at your fingertips?

No matter what type of information you're looking for, the first thing you should check is the reliability and accuracy of the source you're using. How correct is the information on the website? Internet sites are used for a variety of purposes, including advertising, informing, and reporting. The second thing you should check is the purpose of the information presented and the author's credentials.

If you are doing research in order to write a scientific article, look for articles with a similar purpose and make sure the author is a legitimate source in the scientific community. For example, you could look at the author's background, education, professional qualifications, job title, and the legitimacy of the organization the author is writing for. Reliable scientific journals, for example, are always peer-reviewed. I wouldn't trust an online source if recognized experts in the field have not reviewed the articles for accuracy. You wouldn't want to rely on inaccurate information by accident!

Let's Practice!

Sally knows a lot about how to search for accurate information.

Instructions: Complete the text below by choosing the right words. recognized, digital, accuracy, reliable, source, clicks, legitimate, reviewed, legitimacy.

1. If you are a _____ native like me, finding the right information is always a few _____ away!
2. If you are doing research, make sure the author is a _____ source in the scientific community.
3. For example, you could look at the author's professional qualifications and the _____ of the organization the author is writing for.
4. _____ scientific journals are always peer-_____.
5. I wouldn't trust an online _____ if _____ experts in the field have not reviewed the articles for _____.

Let's Practice!

Sally knows how to get her point across* with her readers.

* When you "get your point across", you are convincing.

Instructions: Complete the sentences by choosing from the words below.

Word Bank

- How correct
- that lies at your fingertips
- Do you remember how
- does that mean

1. _____ life was before the Internet?
2. However, _____ you always find what you're looking for online?
3. How do you process all the information _____?
4. _____ is the information on the website?

Extension Activity

Write an advice column on how to deal with Internet problems.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Write an article (10 - 14 lines) about the issues that people can face when they go online.
- Describe the problems that people can have.
- Offer suggestions and solutions to these problems.
- Read your text aloud to a partner. Ask for clarification about your partner's technical issues.

Self-Assessment

Yes **No**

I write about technology and technical problems.

☐ ☐

I offer suggestions and solutions to technical problems.

☐ ☐

I ask for clarification to emphasize my points about technology.

☐ ☐

Target Words

- **digital native** (noun): someone who has used the Internet from an early age
e.g. It's impossible to remember life before the Internet if you are a digital native.
- **to process** (verb): to go through and absorb a large amount of data
e.g. How do you process all the information you find online?
- **at your fingertips** (expression): readily available
e.g. How do you process all the information that lies at your fingertips?
- **reliability** (noun): the quality of something you can rely on
e.g. You should check the reliability of the information.
- **accuracy** (noun): the quality of something being accurate
e.g. You should also check the accuracy of the website.
- **source** (noun): place from which you can obtain something
e.g. The source you're using should be reliable and accurate.
- **credentials** (noun): a set of skills and achievements proving a person's qualification
e.g. The second thing you should check is the author's credentials.
- **legitimacy** (noun): the quality of something being authentic and true
e.g. You could look at the legitimacy of the organization the author is writing for.
- **peer-reviewed** (adjective): a process of checking for accuracy
e.g. Reliable scientific journals are always peer-reviewed.

Learning Points

Discussing How to Deal With Problems

One way to discuss how to deal with problems is to say what you would do if you were in someone else's situation. It is particularly useful if you want to discuss a complicated technical problem.

If you write an article about solving issues, you can use modals like *would*, *should* or *could* to suggest solutions and offer assistance.

I would ...

I wouldn't ...

You could ...

These are examples of Sally giving suggestions about how to deal with technical problems.

Examples:

- *The first thing you should check is the reliability and accuracy of the source you're using.*
- *The second thing you should check is the purpose of the information presented and the author's credentials.*
- *For example, you could look at the author's background.*
- *I wouldn't trust an online source if recognized experts in the field have not reviewed the articles for accuracy.*

Learning Points

Questions Within Sentences

You ask for clarification when you want more details of what the other person is talking about.

We often ask for clarification when we are not clear on what the other person is referring to. We ask the other person to be more specific by giving more information.

You can use questions with sentences to ask for clarification. You ask a question including a sentence within the question, like *Don't you think it sounds a bit too intense?*

Questions with sentences are called **embedded questions**.

You can use **embedded questions**, like *Can you tell me ... ?* or *Do you know if/which/what ... ?* to ask for clarification.

Main Question	Embedded Question
Do you know ...	what/where/when/who ... ?
Do you remember ...	what/where/when/who ... ?
Can you tell me ...	what/where/when/who ... ?
Could you tell me ...	what/where/when/who ... ?

Examples:

- *Do you remember how life was before the Internet? (question with sentence)*
- *However, does that mean you always find what you're looking for online? (asking for clarification)*
